Vite

下一代的前端工具链

开始

为什么选择 Vite

- 无论项目大小有多大,启动应用都只需更少的时间;
- 按需编译;
- 零配置,开箱即用;
- Esbuild 能力带来的 Typescript/jsx 的原生支持

•

Native ESM based dev server module Server ready Pynamic import (code split point)

创建第一个 VITE 项目

使用 NPM:

```
$ npm create vite@latest
```

使用 Yarn:

```
$ yarn create vite
```

使用 Yarn:

```
$ yarn create vite

$ yarn create v1.22.10

$ [1/4] Q Resolving packages...
$ [2/4] Fetching packages...
$ [3/4] D Linking dependencies...
$ [4/4] Building fresh packages...

? Project name: > vite-project
```

选择模板

```
? Select a framework: > - Use arrow-keys. Return to submit.
    Vanilla

> Vue
    React
    Preact
    Lit
    Svelte
    Others
```

选择语言

```
? Select a variant: > - Use arrow-keys. Return to submit.
) JavaScript
  TypeScript
  Customize with create-vue >
  Nuxt >
```

运行

```
Done. Now run:

cd my-porject

yarn

yarn dev
```

```
"name": "my-porject",
"private": true,
"version": "0.0.0",
"type": "module",
"scripts": {
  "dev": "vite", // 启动开发服务器,别名: `vite dev`, `vite serve`
  "build": "vite build", // 为生产环境构建产物
  "preview": "vite preview" // 本地预览生产构建产物
"dependencies": {
 "vue": "^3.2.45"
"devDependencies": {
  "@vitejs/plugin-vue": "^4.0.0",
  "vite": "^4.1.0"
```

```
开发环境配置
```

```
// .env.development
// 开发环境
VITE APP APP ID = edu-city-test-V1-1
// 测试环境打包配置
# VITE APP BASE API = '/'
```

VITE APP BASE SSO CENTER SERVER URL= https://test-open.changyan.com/sso VITE_APP_BASE_LOGIN_URL= https://wuhutestbasic.changyan.cn/desktop/home/#/

// 开发环境打包配置 #VITE APP BASE API = 'http://10.40.163.34:9090' // 其他配置 VITE APP BASE LOGIN REDIRECT URL = http://localhost:8090/

VITE APP BASE SSO SERVER URL = https://test-open.changyan.com/sso

静态部署项目

```
"scripts": {
    "dev": "vite", // 启动开发服务器,别名: `vite dev`, `vite serve`
    "build:dev": "vite build --mode development",
    "build:prod": "vite build --mode production"
    "preview": "vite preview" // 本地预览生产构建产物
},
```

Plugin

}),

```
$ npm add -D @vitejs/plugin-legacy

// vite.config.js
import legacy from '@vitejs/plugin-legacy'
import { defineConfig } from 'vite'

export default defineConfig({
   plugins: [
   legacy({
      targets: ['defaults', 'not IE 11'],
```

Thanks
